

## COMCAST BUSINESS EXTENDS FIBER NETWORK TO BRING MULTI-GIGABIT ETHERNET SERVICES TO COMMERCIAL AREAS IN ALBUQUERQUE AND SANTA FE

*New Competitive Option Offers Secure, Scalable Bandwidth for Cloud Computing, Mobility, Online Backup and More to Businesses Across Albuquerque, Santa Fe Metro Areas*

**ALBUQUERQUE, NM – November 19, 2014** – [Comcast Business](#) today announced that its full portfolio of [Ethernet services](#) will be available in Albuquerque and Santa Fe in early 2015, with some services delivered later this year. Capable of bandwidth up to 10 Gigabits-per-second (Gbps), these services are specifically designed for businesses, schools, hospitals and other organizations requiring more capacity, looking to network multiple locations together, or planning to connect their offices to a third-party data center.

“Whether it’s an engineering firm sending digital blueprints, a law office backing up client records online, or a restaurant needing more Wi-Fi capacity, bandwidth is increasingly becoming the engine driving all businesses,” said Shawn Adamson, vice president for Comcast Business in the Mile High Region. “This fiber expansion will help companies in Albuquerque to grow and expand their business, while driving competition, innovation and value for our customers.”

All of Comcast’s Ethernet services are delivered over an advanced network that spans 140,000 miles across 39 states and the District of Columbia. Serving 20 of the top 25 U.S. markets, Comcast’s network features a 100 Gbps backbone and expanded local footprint through Ethernet over HFC. Bandwidth is available up to 10 Gbps and can be scaled in increments and offered in three different classes of service, backed by strict service level agreements and monitored 24x7x365 from Comcast’s dedicated Network Operations Centers. Comcast was the first service provider in the world to offer Metro Ethernet Forum CE 2.0 certified Ethernet services and was also the first service provider to achieve all three of the previous CE 1.0 certifications (MEF 9, 14 and 18).

Comcast Business offers four Ethernet services, including:

- **Ethernet Private Line** – point-to-point connectivity between two customer sites for bandwidth-intensive applications.
- **Ethernet Virtual Private Line** – a point-to-multipoint connection that allows customers to tailor bandwidth, performance characteristics and cost to meet the needs of their applications.
- **Ethernet Network Service** – multipoint-to-multipoint connectivity to connect organizations with high-bandwidth requirements and multiple locations across Comcast’s network.
- **Ethernet Dedicated Internet** – continuous, high-bandwidth connectivity between customers’ LANs and the public Internet.

In the past year, Comcast Business received three Metro Ethernet Forum (MEF) [Carrier Ethernet Awards](#), including the prestigious *Service Provider of the Year* for North America. Comcast Business was also named the fastest-growing company ranked on Vertical Systems Group’s year-end 2013 [U.S. Carrier Ethernet LEADERBOARD](#).

### About Comcast Business
